

## FRUIT FLY TREATMENT PREPARATION CHECKLIST & INFORMATION

People & pets are required to be out of the service area for the duration of the treatment and for the 2 hours after the treatment was completed to allow the product to dry properly.

Please note that this will not prevent fruit flies from showing up in the future, it will simply kill those present at a faster pace than home remedies.

### Interior Areas That Will Be Treated:

The treatment will focus on the kitchen unless you inform our technician or office that you are noticing the fruit flies elsewhere. We will spray the following areas and then place professional-grade traps.

- Around the sink
- Along the countertops
- Around the appliances

---

### Preparation for Treatment:

Ensure you and all pets have somewhere to go for 3 hours, as you will need to be out of the house for the duration of the treatment and for 2 hours afterward.

- Remove all items from the countertops
- Wash all countertops and appliances with soap and water
- Dispose of all produce/meats that are spoiled, are close to spoiling, or are stored nearby an item that has gone bad (including food in the fridge)
- Clean the inside of the fridge with soap and water
- Cover all fish tanks with a towel/blanket (ensure it is one that has gone through the dryer)

---

### Safety of Treatment:

Technicians will use Dragnet to spray the home, which is safe for both people, including children, and pets, with the exception of fish. For more information, you can download a Material Safety Data Sheet from our website [here](#)
