

SPIDER

Information & Preparation Sheet

People and pets MUST remain out of the treatment area for the duration of the treatment (1HR) and for 2-3 hours afterwards to allow the product time to dry properly.

PEST INFORMATION & TREATMENT GOALS

Please note that you may still see spiders because we cannot prevent them from showing up. However, treating the exterior and interior of the home will cause them to die faster, and hopefully before you see them. It can take approximately 5-14 days for a spider to die after crossing the pesticide because the pesticide needs to work its way up to the spider's body.

De-webbing is available as an add-on, if you'd like to add this service, please request it from the office prior to your scheduled treatment date.

TREATMENT AREAS

INTERIOR TREATMENT AREAS

- Along baseboards on all levels of the home
- Underneath sinks & around toilets
- Inside closets & under beds
- Crawlspace & attics may be fogged.

EXTERIOR TREATMENT AREAS

- Perimeter of the house where the foundation meets the ground.
- Around windows & door frames
- Around spider-prone areas.

TREATMENT PREPARATION

- Pick up any clothes or toys that are on the floor.
- Cover all fish tanks with a thick blanket or a towel.
- Ensure technicians have access to baseboards on all levels of the home.
- Clear out beneath all sinks.

TREATMENT WARRANTY

We include 2 follow-ups within 60 days of our initial treatment (if necessary) to be completed at your request.

DRAGNET

Safety & Information Sheet

Trade Name	Registration Number	Active Ingredient	Dilution
Dragnet FT	24175	Permethrin	0.05%

Frequently Asked Questions

1. I have asthma; is it safe?

Once the Dragnet is dry, there is no health risk for you to enter the space; however, prior to drying, the Dragnet may irritate your asthma. If you have asthma, we recommend adding an additional hour to your wait time before re-entering the treated area.

2. Will it stain?

The only material Dragnet is known to stain is silk. However, we dilute the Dragnet with water, so if your walls/floors are dirty, they may appear stained because the areas sprayed will be cleaner than the areas untreated. It is also important to keep in mind that Dragnet dries transparent, but until it is dry, it is noticeable.

3. Is it safe for my pets and or my kids?

When dry, Dragnet does not pose a threat to people or pets, with the exception of fish. This pesticide is highly toxic to aquatic creatures, and as such, we will not treat areas around fish tanks, streams, rivers, or ponds.

4. What if it isn't dry when I come home?

There are various reasons that may cause the pesticide to dry a little slower. For example, if it is a cold day or if you have hardwood floors. If the areas treated are still damp, leave for another hour and then return. If there is pooling, the liquid can be cleaned up with a towel and washed. This is common with hardwood floors because they do not absorb as much water, but this is not a concern because the pesticide will have been absorbed, and the liquid remaining will be 95-100% water.

If you have any questions or concerns, please feel free to contact us at 604-854-2847 or info@bugmanbc.com. If you'd like to review the Material & Safety Data Sheet, click [HERE](#)
